

DND ProofMasters

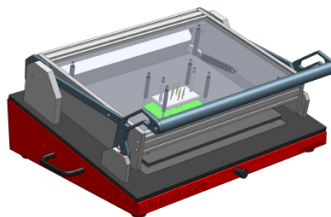

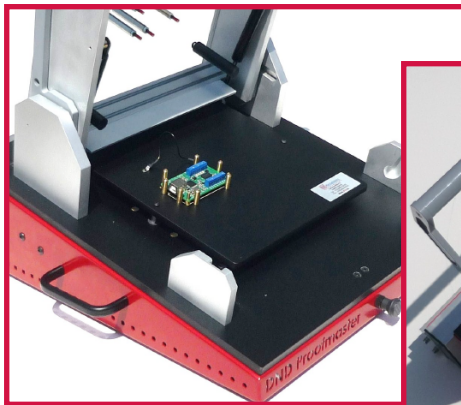

DND ProofMasters are manufactured based on an unique engineering concept: A basic version test fixture is selected, the product to be tested is analyzed and the test fixture customized to the product.

Test Fixture are an important part in the test process of PCB's. A complete functional test with the use of a test fixture is in most cases the only reliable method to guarantee a fully functional product.

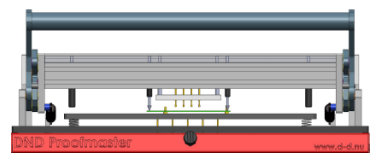

D&D Mechatronics has a lot of experience in realizing mechatronic solutions. With this experience we have developed the DND ProofMasters series, a combination of optimal performance and a short cost-recovery time.

- **DND Sprinter Manual Test Fixture**
With fully closed top cover;
Linear movement;
Top and bottom contacting;
Compatible with standard interfaces.

SolidWorks® 3D Drawing

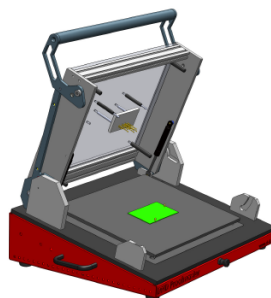

Probes contacting both top and bottom of PCB.

When desired the DND ProofMasters are delivered with cabling, Data Acquisition, interface connectors and/or software (LabVIEW or .NET).

LabVIEW is a registered trademark of National Instruments.
.NET is a registered trademark of the Microsoft Corporation.
